

EDUGENIE

Google Gemini Powered Learning Assistant

Naan Mudhalvan – Project Synopsis

1. Project Overview

EduGenie is an AI-powered learning assistant designed to help students learn concepts in a simple, interactive, and personalized way. The system uses Google Gemini to understand student questions and generate explanations, examples, summaries, quizzes, and study assistance.

2. Problem Statement

Students often depend on multiple learning resources to understand a single topic. They may find it difficult to identify the right explanation, ask follow-up questions, revise important points, and receive immediate personalized support. EduGenie aims to provide these learning facilities through one AI-based assistant.

3. Objectives

- Provide instant AI-based answers to academic questions.
- Explain difficult concepts in a student-friendly manner.
- Generate summaries and important points for revision.
- Create practice questions and quizzes based on topics.
- Support personalized and interactive learning.

4. Proposed System

The proposed system provides a web-based learning interface where students can enter questions or topics. The application sends the request to the Google Gemini API and displays the generated response. Additional learning features such as topic explanation, summarization, quiz generation, and study assistance can be provided through separate modules.

5. Main Modules

- 1. Student Interface:** Provides a simple interface for entering questions and viewing responses.
- 2. AI Learning Assistant:** Uses Google Gemini to generate educational responses.
- 3. Explanation Module:** Converts complex concepts into easy-to-understand explanations.
- 4. Summary Module:** Produces concise study notes and key points.
- 5. Quiz Module:** Generates practice questions from the selected topic.
- 6. Study Support Module:** Helps students with revision and topic-based learning.

6. Technologies Used

Component	Technology
-----------	------------

Frontend	HTML, CSS, JavaScript
Backend	Python / Flask
AI Model	Google Gemini API
Database	SQLite / MySQL (optional)
Development Tool	VS Code

7. System Workflow

Student enters a question/topic → EduGenie processes the request → Google Gemini generates the response → EduGenie displays the learning content → Student can continue with follow-up questions, summaries, or quizzes.

8. Expected Outcome

The project is expected to provide students with an accessible and interactive AI learning assistant. It can reduce the time needed to search for basic explanations and encourage students to learn through questions, examples, summaries, and practice.

9. Future Enhancements

- Voice-based interaction and speech-to-text.
- Multi-language learning support.
- Student progress tracking and personalized recommendations.
- Image-based question understanding.
- Adaptive quizzes based on student performance.

10. Conclusion

EduGenie combines generative AI with an educational interface to create an interactive learning environment. By using Google Gemini, the system can provide personalized explanations and learning activities, making it a useful academic support tool for students.
